

| Week No. | Evaluation         | Topic Name                                                                                                                                                                                                                      |
|----------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Week 3   | CA1-> Evaluation 1 | Device like HUB, Switch and Routers. Uses of Computer Networks, Networks and Types, NETWORK MODELS : Protocol Layering, TCP/IP protocol suite, OSI Model                                                                        |
| Week 4   | CA1-> Evaluation 2 | Network hardware architecture and its topologies. Network software architecture and its layers and protocols. Introduction to internet, browser, web server, URL, domain name, IP address, packets.                             |
| Week 5   | CA1-> Evaluation 3 | Basics for Data Communications and Analog and Digital signals, Transmission Impairments and Performance, Data Rate, Transmission media like Guided and Unguided media, Cabling standards                                        |
| Week 7   | CA2-> Evaluation 1 | Digital to Digital Conversion, Analog to Digital Conversion, Analog to Analog conversion, Digital to Analog conversion. Multiple Access Protocols- ALOHA, CSMA and CSMA/CD, Random Access, Controlled access, Ethernet protocol |
| Week 8   | CA2-> Evaluation 2 | Data link Layer design issues, Elementary Datalink Protocols, Error Detection and Correction- Hamming code, CRC, Parity, Checksum                                                                                               |

|         |                    |                                                                                                                                                                                                         |
|---------|--------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Week 9  | CA2-> Evaluation 3 | IPv4 and IPv6 Header, IPv6 addressing                                                                                                                                                                   |
| Week 11 | CA3-> Evaluation 1 | Network layer design issue, IP Addressing Both Classfull and Classless, Subnetting and Supernetting, Subnetting examples                                                                                |
| Week 12 | CA3-> Evaluation 2 | Routing Algorithm-Shortest path algorithm, Distance vector Routing, Link State routing, Routing algorithms, Unicast routing protocols NETWORK LAYER: Congestion Control : Congestion Control Algorithms |
| Week 13 | CA3-> Evaluation 3 | Transport Layer Services, TCP- Header format and handshaking operation, UDP- Header format                                                                                                              |
