

IR Sensor(Code)

IRsensor | Arduino 1.8.19

File Edit Sketch Tools Help

IRsensor

```
const int ProxSensor=2;
void setup()
{
    Serial.begin(9600);
    pinMode(13, OUTPUT);
    pinMode(ProxSensor, INPUT);
}
void loop()
{
    if(digitalRead(ProxSensor)==HIGH)
    {
        digitalWrite(13, HIGH);
        Serial.println("It's High Now-Name:Rahul & Roll Number:36");
    }
    else
    {
        digitalWrite(13, LOW);
        Serial.println("It's Low Now-Section-K23JJ");
    }
    delay(100);
}
```

**Sketch→Export Compiled Binary---
for Hex file of Proteus Arduino**

we have the command 'Serial. begin(9600)'. This starts serial communication, so that the Arduino can send out commands through the USB connection. The value 9600 is called the 'baud rate' of the connection.
