

# Profit / Loss

$$\begin{aligned} \text{Profit} &= SP - CP \\ \text{Loss} &= CP - SP \end{aligned}$$

SP / CP / P/L

Q. By selling an article on 600  
Seller made 20% profit CP = ?

$$20\% = \frac{1}{5} \leftarrow \text{Profit}$$

$$\begin{aligned} CP &= 5 \quad P = 5 + 1 = 6 \\ SP &= 6 \quad \text{Loss } 5 - 1 = 4 \\ P &= 1 \end{aligned}$$

$$\begin{aligned} 6 &- 600 \\ 1 &- 100 \\ 5 &- 500 \end{aligned}$$

$$CP = 500$$

$$500$$

Q. By ~~selling~~ Cost price of  
an article is  
1000 after selling it on 25%  
profit what is the SP?

$$CP = 1000$$

$$25\% = \frac{1}{4}$$

$$\begin{aligned} CP &= 1000 \\ SP &= \\ P &= 1 \end{aligned}$$

$$\begin{aligned} SP &= 4 + 1 \\ 25 \times 250 \\ &= 1250 \end{aligned}$$

$$\begin{aligned} 4 \times 1000 \\ 2 \times 500 \\ 250 \\ 1 = 250 \end{aligned}$$

Q. on purchasing of 2 articles  
at 9600s one article  
has been solved on 20%  
profit and another article  
has been solved on 60% loss  
and what is the CP of  
first article?

after selling both the articles  
we found that selling price  
of both the articles same

$$\text{I} \quad \begin{array}{cc} CP & SP \\ 5 & 6 \end{array}$$

$$\text{II} \quad \begin{array}{cc} 5 & 2 \times 3 \\ 15 & 6 \end{array}$$

$$\begin{aligned} 2p &- 9600 \\ 1 &- 4800 \end{aligned}$$

$$4800 \times 5 = 24000$$

$$\begin{aligned} Q &= MP = 500 \\ \text{dis} &= 20\% \\ SP &= ? \end{aligned}$$

$$\begin{array}{l} P/L \rightarrow CP \\ Dis \rightarrow MP \end{array}$$

$$20\% = \frac{1}{5}$$

$$MP = 5$$

$$Dis = 1$$

$$SP = 4$$

$$\begin{aligned} 5 &- 500 \\ 4 &= 100 \end{aligned}$$

$$4 \times 1000 = 4000$$

$$\begin{aligned} 5 - 1 \\ = 4 \end{aligned}$$

$$SP = CP + P$$

$$Q \Rightarrow MP = 500$$

$$\Rightarrow DIS = 20\%$$

after selling & seller  
got 20% profit CP = ?

$$DIS = 20 = \frac{1}{5}$$

$$MP = 8$$

$$DIS = 1$$

$$SP = 4 \times 100 = 400$$

$$C_{100} = 100\% + 20$$

$$C_{100} = 120\%$$

$$C_{100} = \frac{120}{100}$$

$$C_{120}$$

$$8 - 1 = 7$$

$$= 4$$

$$CP$$

Selling article at  
same CP = (CP = SP)

↳ but weight = 900

$$(1000 - 900) = 1000$$

(always use CP & weight)  
mentioned

$$CP = 900$$

$$SP = 1000$$

$$P\% = \frac{P}{CP}$$

$$P = SP - CP$$

$$= 100$$

$$= \frac{100}{900} = \frac{1}{9}\%$$

$\frac{1}{9}\%$  profit
